SINGLE USER BUSINESS CYBERSECURITY PACKAGE

$799*

CYBERSECURITY EDUCATION

85% of data breaches occur due to user behaviors and weak passwords. Rocky Mountain Cybersecurity provides education on best practices to secure your business from threats and training on how to manage your passwords to prevent unauthorized access to your system.

FIREWALL HARDENING

The strongest vault cannot protect anything if the door is left wide open. Unfortunately firewalls are often not configured for maximum protection by default, and open ports provide bad actors easy access to your data. We provide the expertise to secure this vital layer of system protection.

OFFICE 365 HARDENING

Microsoft Office 365 and Gmail services are not inherently secure. In order to make their products easier to access, software developers often do not enable the most secure settings available for their products. Rocky Mountain Cybersecurity can help you use these products safely by activating advanced security features.

SYSTEM VULNERABILITY SCAN

Even the most vigilant users and IT providers make mistakes. A single setting, missed software update, or virus scanner out of date can allow a path for a breach. Our system scanning service scans your entire system for vulnerabilities and identifies all steps required to plug the gaps and keep your system secure.

DARK WEB REPORT

Data breaches of large companies are happening all the time. Their customer's login credentials are for sale on the dark web. Chances are you or your employees' current and past passwords are available for purchase. We discover what accounts and passwords are compromising your business.

MONTHLY CYBERSECURITY MONITORING

$135/mo.*

CONTINUE PROTECTING YOUR BUSINESS

Threats to your business' security are constantly evolving. Rocky Mountain Cybersecurity keeps your business safe with **monthly system scans**, **dark web reports**, and an **included password manager** to protect your future from data breaches

*Additional fees may apply for additional user accounts, workstations, and emails protected.
